1 Introduction

A few years ago I was working on a project where we are working on add ins for Office365. These add ins must be tested when they where ready.

For this all the tests where created with Visual Studio with using Selenium. That was working fine. But there are some little issues to work with that:

- You need developer experience to use this
- It is a labor-intensive process to create test scenarios
- Visual Studio is needed to create and update the tests

With this solution everybody can create, updating and executing test scenarios for web sites.

So, hopefully the user likes this application.

2 Configuration

In the configuration screen there are four options the user can change:

- The [Border Color](#)
- The [Border Thickness](#)
- The [Duration \(in milliseconds\)](#) the rectangle is visible
- How many [Extra Checks](#) are needed when an element is not found instantly

2.1 Border Color

With this option the user can set the color of the rectangle showed when a visible element is found in the web page.

It is possible to select one of the system colors. The user can choose from 140 different colors:

AliceBlue
AntiqueWhite
Aqua
Aquamarine
Azure
Beige
Bisque
Black
BlanchedAlmond
Blue
BlueViolet
Brown
BurlyWood
CadetBlue
Chartreuse
Chocolate
Coral
CornflowerBlue

Border Color:	<input type="text" value="Red"/>	Example: 
Border Thickness:	<input type="text" value="3"/>	
Duration (in milliseconds):	<input type="text" value="10"/>	
Extra checks by failure:	<input type="text" value="0"/>	

2.3 Duration

With the Duration option it will be possible to set the time the user wants to show the rectangle at the selected element.

Just as the [Border Color](#) option and the [Border Thickness](#) option, there is a drop down box to select one of the following values:

10
20
50
100
200
500
750
1000
1250
1500
2000
3000
5000
10000

Keep in mind that all these values are in milliseconds.

Extra checks by failure: 0 ▼

2.4 Extra Checks

If an element is not found directly, it will be possible that this element just on the site, but not directly loaded. After a while the element can then be added to the web page. In that case you can configure how many times the application has to check if the element is already loaded.

The screenshot shows a 'Settings - Configuration' window with a title bar and a close button. The main area is titled 'Configuration Settings'. It contains four configuration options, each with a label and a dropdown menu: 'Border Color' (set to 'Red'), 'Border Thickness' (set to '3'), 'Duration (in milliseconds)' (set to '10'), and 'Extra checks by failure' (set to '0'). A green arrow points to the 'Extra checks by failure' dropdown. To the right of these settings is an 'Example:' section with a red rectangular border. At the bottom center is a 'Save Configuration' button.

The user can select 0, 1, 2, 3, 4 or 5 times to check the missing element.

Steps:

- Select the Extra checks you want in the drop box.

Settings - Configuration ✕

3 Extras

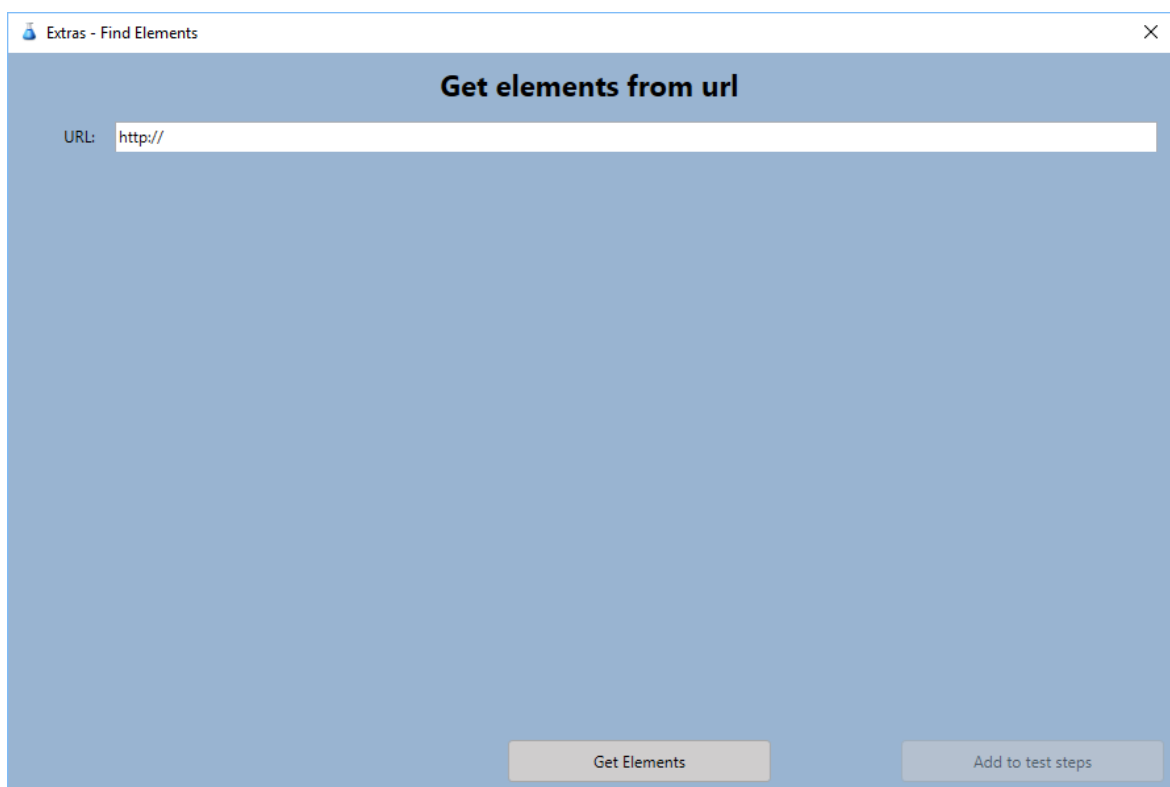

It is possible to add all the elements from a website by hand. See also [Edit Test Steps](#). But it will be much easier to do this automatically.

The Extras Menu has 2 options. One for data that is not in the database and one for the data what already is in the database:

- [Elements URL](#)
- [Elements Database](#)

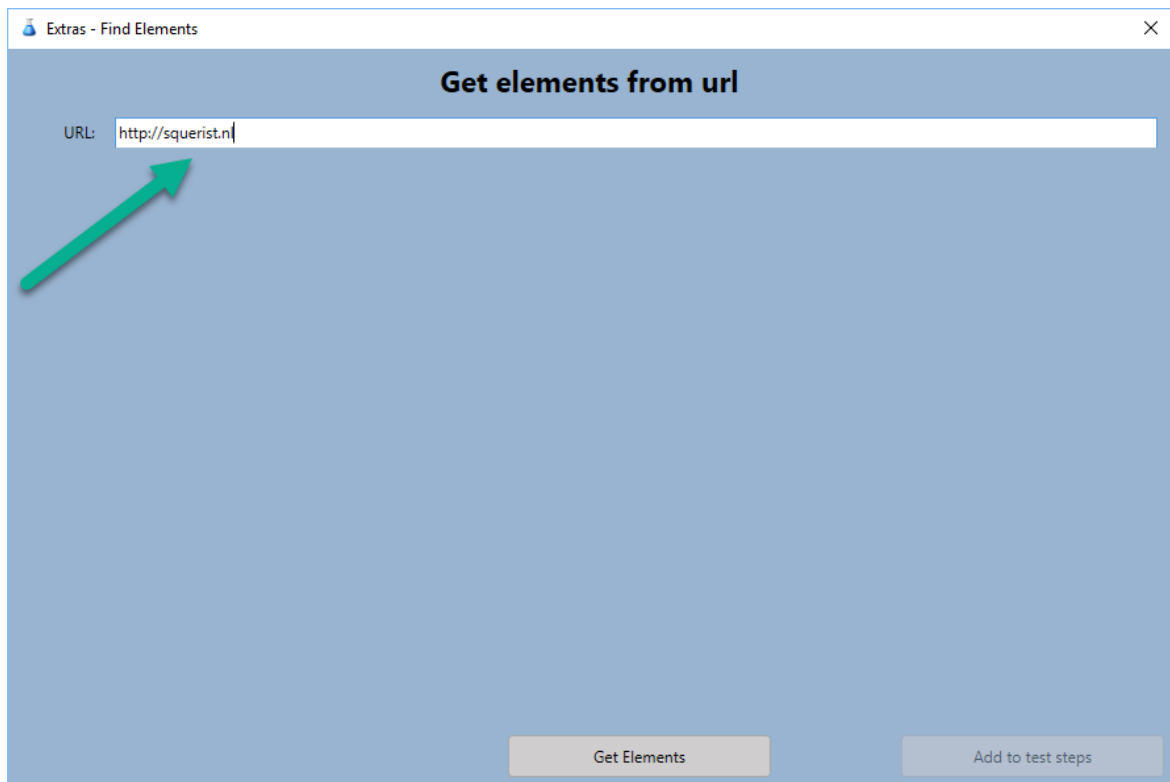

3.1 Elements URL

For getting the elements directly from the url select this option. You can do this by clicking on the menu option "Extras" and select Elements URL.

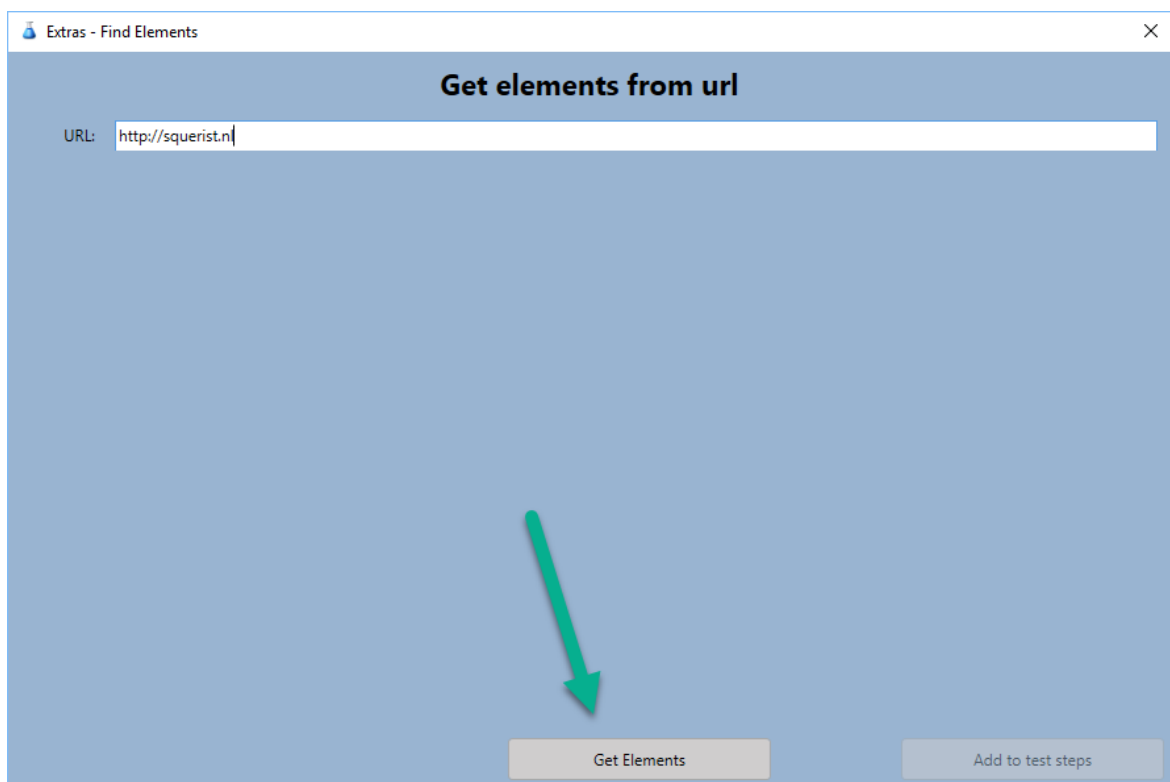

Steps:

- Fill in the URL you want to get the elements.

- Click the Get elements button.

The application will now get all the elements from the URL and put the data to the database.

Extras - Find Elements

Get elements from url

Test Case:

Get Elements Add to test steps

- Click the Add to test steps button

- Select the test scenario you want to add the elements to and click the Open button.

All the selected element are now added to the selected test scenario. You can check this by using the [Edit Test Steps](#) option.

4 Bulk Changes

For Bulk Changes there are 3 options:

- [Import Elements](#)
- [Copy Elements](#)
- [Delete Elements](#)

4.1 Import Elements

To get all the elements off a website, there are several addons to get the elements in a file. For instance in an XML file. The W.A.T.E.R. add on for Chrome is a good example.

To use this add on do the following steps:

- Open Chrome
- Type the correct url for the site you want to get the elements
- Open the W.A.T.E.R. addon
- Select the XML (.xml) option

W.A.T.E.R

Page Object Builder for Automated Testing

File Outputs:

- ☐ Text (.txt)
- ☒ XML (.xml)
- ☐ Selenium (.java)
- ☐ Javascript Objects (.js)

Get HTML

Advanced Options

+

- Click the button 'Get HTML'

W.A.T.E.R

Page Object Builder for Automated Testing

File Outputs:

- ☐ Text (.txt)
- ☒ XML (.xml)
- ☐ Selenium (.java)
- ☐ Javascript Objects (.js)

Get HTML

Advanced Options

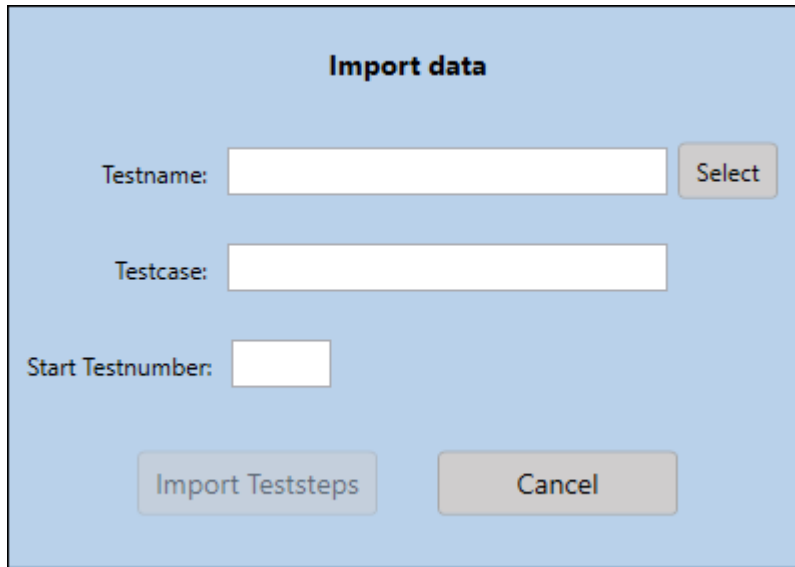

+

W.A.T.E.R. will create an XML file and put that in the download directory.

To get all the elements in the test scenario follow the step below:

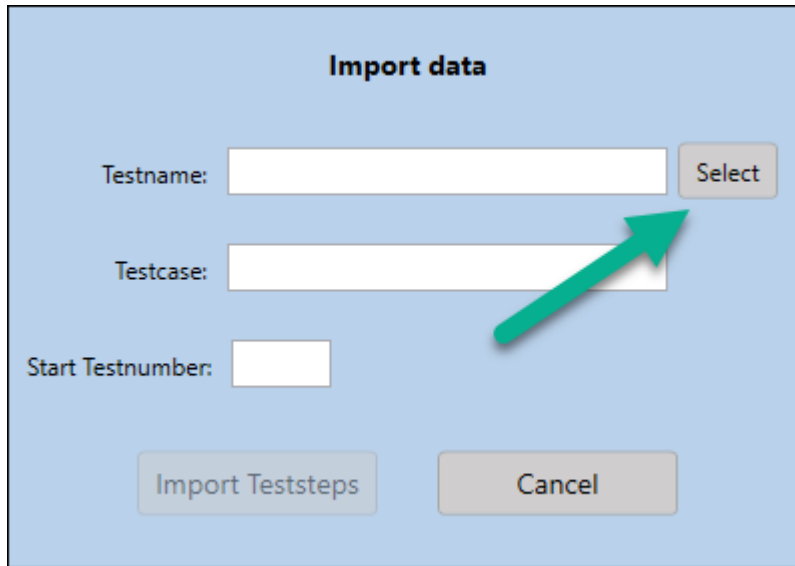

Steps:

- Open the Import Elements option in the Bulk Changes Menu.

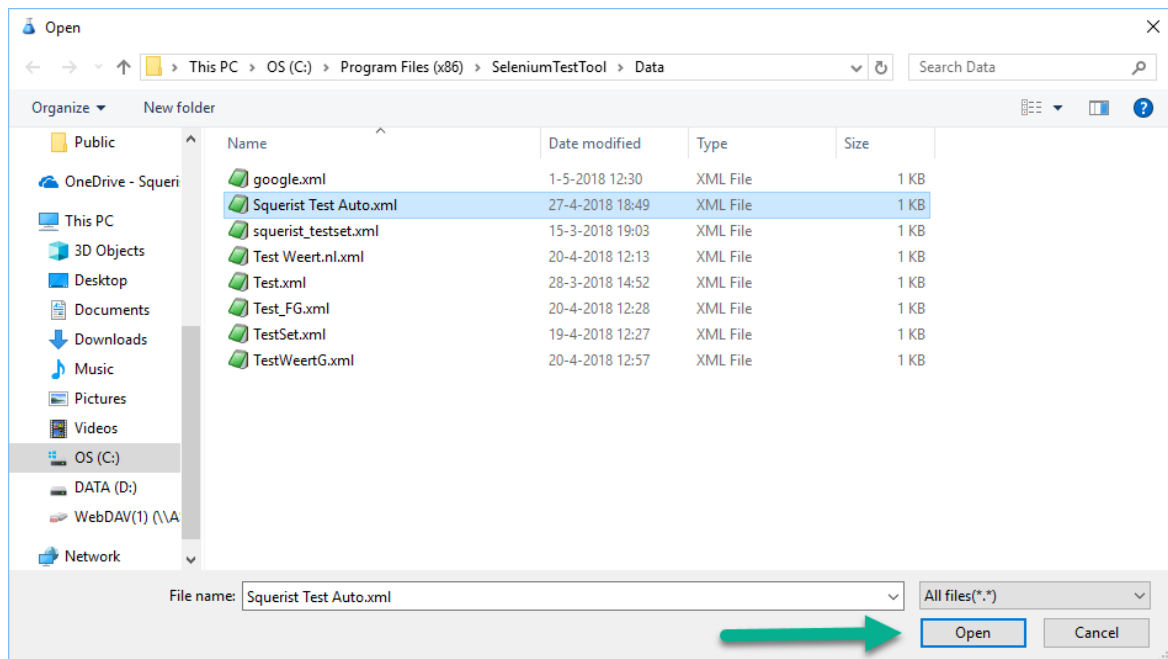

The screenshot shows a dialog box titled "Import data" with a light blue background. It contains three input fields: "Testname:" followed by a text box and a "Select" button, "Testcase:" followed by a text box, and "Start Testnumber:" followed by a text box. At the bottom, there are two buttons: "Import Teststeps" and "Cancel".

- Click the Select button to select one of the available test scenarios.

This screenshot is identical to the previous one, but it includes a large green arrow pointing from the bottom right towards the "Select" button next to the "Testname:" field.

- Select one of the XML files and click the Open button

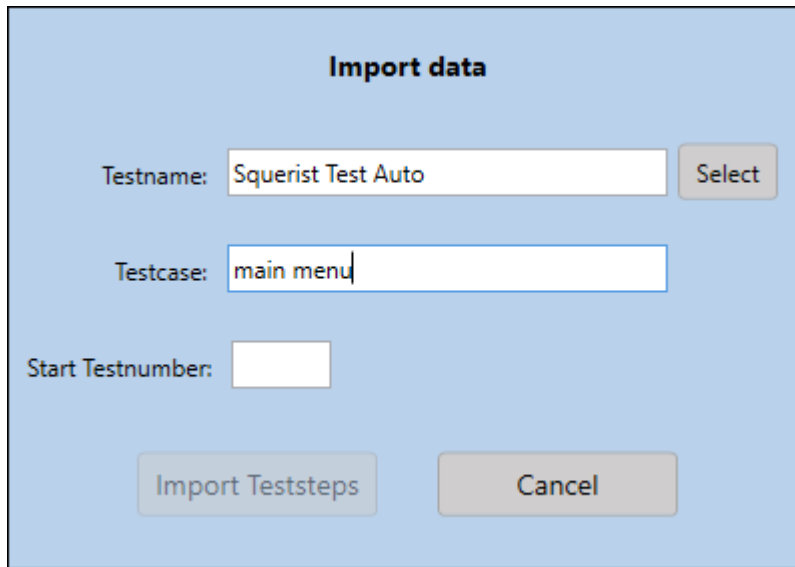

- The Testname is filled in with the selected test scenario name.

The 'Import data' dialog box has the following fields and buttons:

- Testname:** A text box containing 'Squerist Test Auto' and a 'Select' button.
- Testcase:** An empty text box.
- Start Testnumber:** An empty text box.
- Buttons:** 'Import Teststeps' (highlighted) and 'Cancel'.

- Type the Testcase name in the Testcase textbox

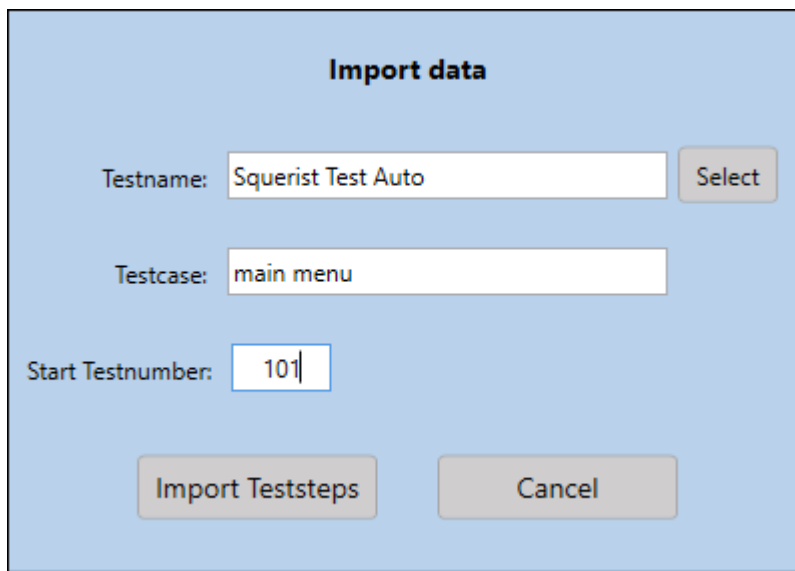

Import data

Testname:

Testcase:

Start Testnumber:

- Fill in the Start Testnumber value in the Start Testnumber textbox.

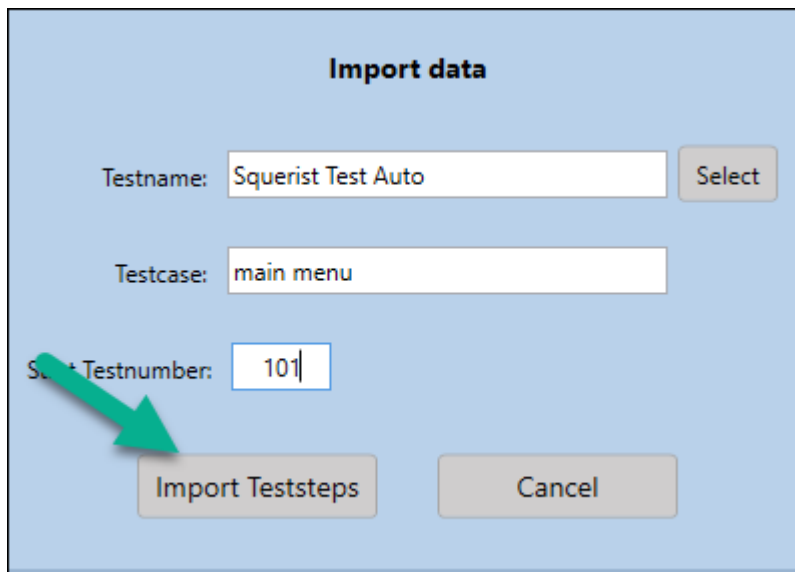

Import data

Testname:

Testcase:

Start Testnumber:

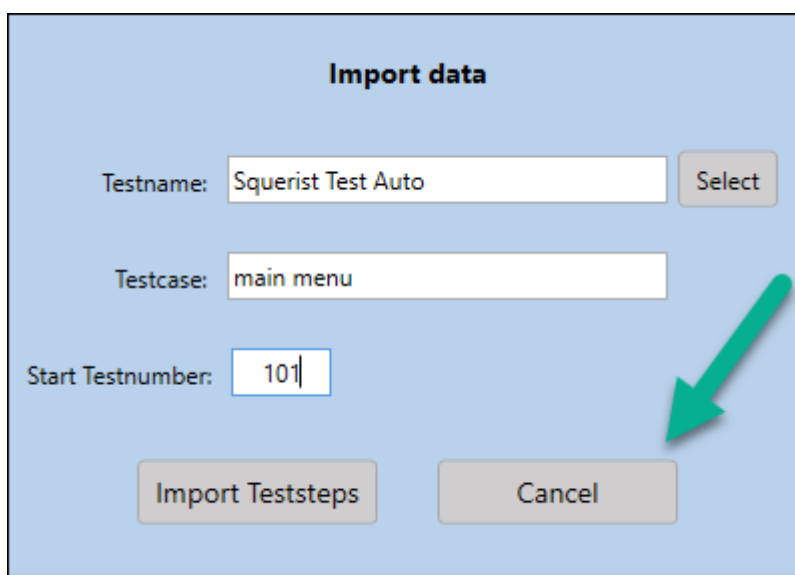

- Now it will be possible to use the Import Teststeps button

The screenshot shows a dialog box titled "Import data" with a light blue background. It contains three input fields: "Testname:" with the value "Squerist Test Auto", "Testcase:" with the value "main menu", and "Start Testnumber:" with the value "101". To the right of the "Testname:" field is a "Select" button. At the bottom are two buttons: "Import Teststeps" and "Cancel". A green arrow points from the left towards the "Import Teststeps" button.

After clicking Import Teststeps button all the data will be put in the database for later use.

If the user want to terminate this action, he of she can click the Cancel button.

This screenshot is identical to the one above, showing the "Import data" dialog box with the same input fields and buttons. However, a green arrow points from the right towards the "Cancel" button.

4.2 Copy Elements

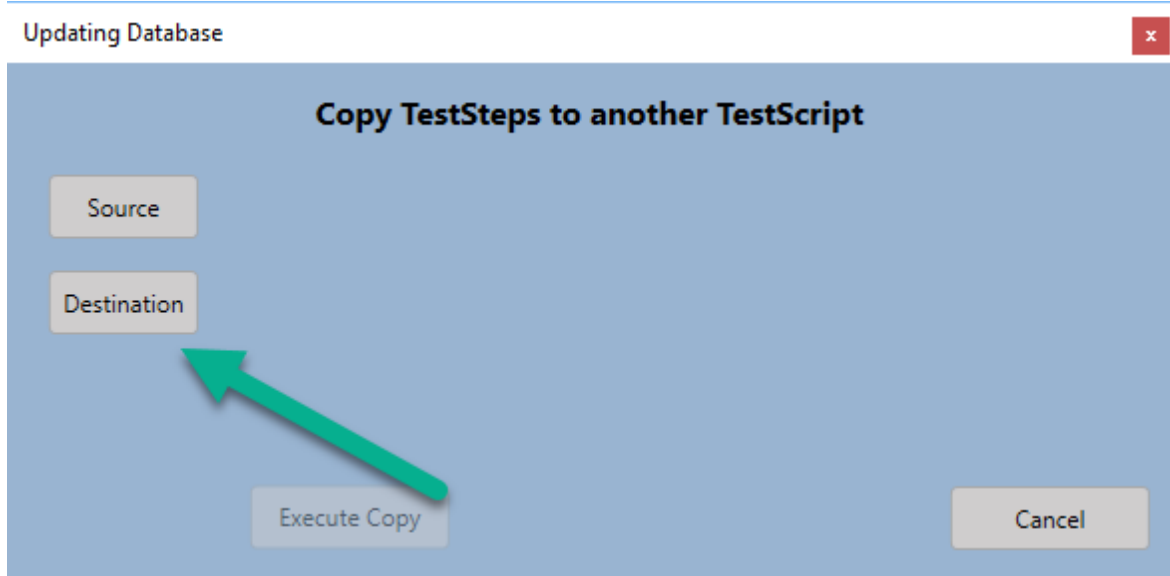

After testing a smaller part of the test steps it will be possible to put the test step from the smaller test scenario into another test scenario. For doing this you can use the following option:

Steps:

- Open the Copy Elements option in the Bulk Changes Menu.

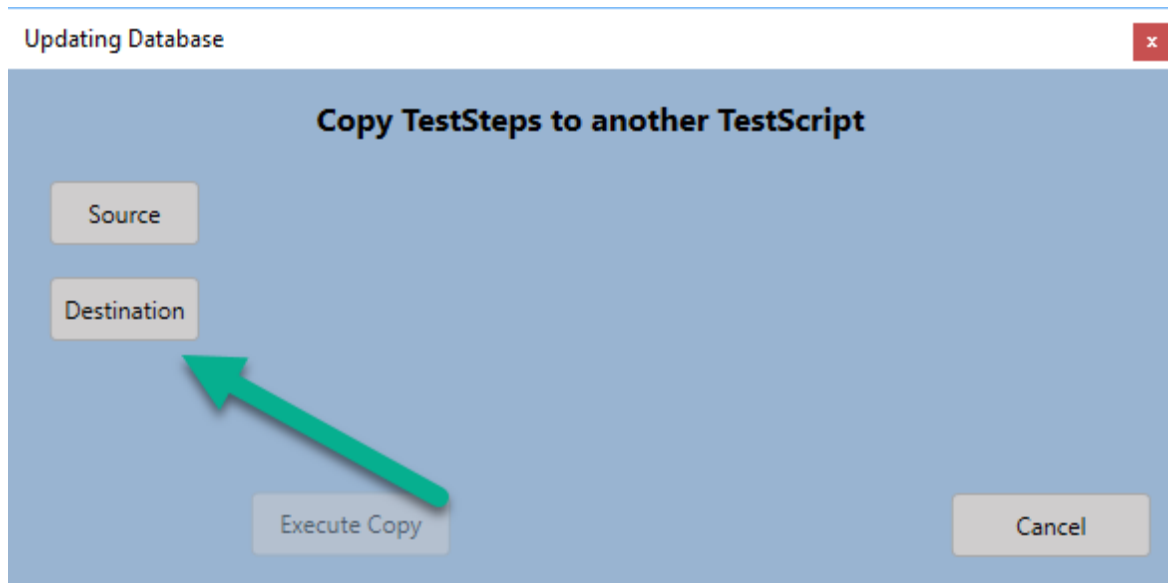

- Click the Source button to select the test scenario which elements you want to copy.

- Select an XML file with the test script you want to use and click the Open button

- Click the Destination button to select the test scenario which elements you want to copy.

- Select an XML file with the test script you want to use and click the Open button

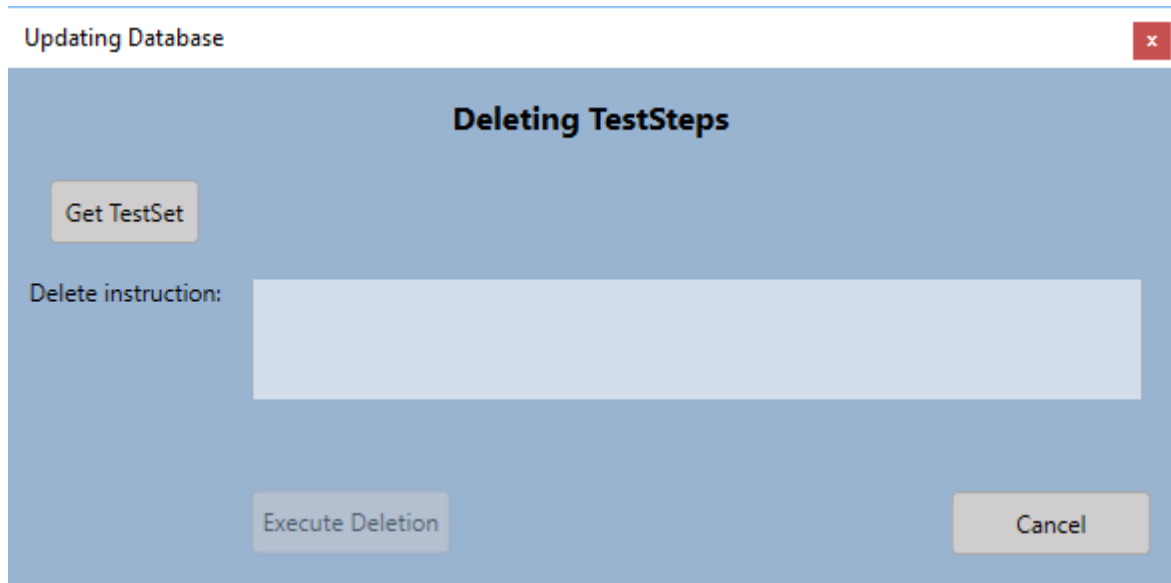

-

4.3 Delete Elements

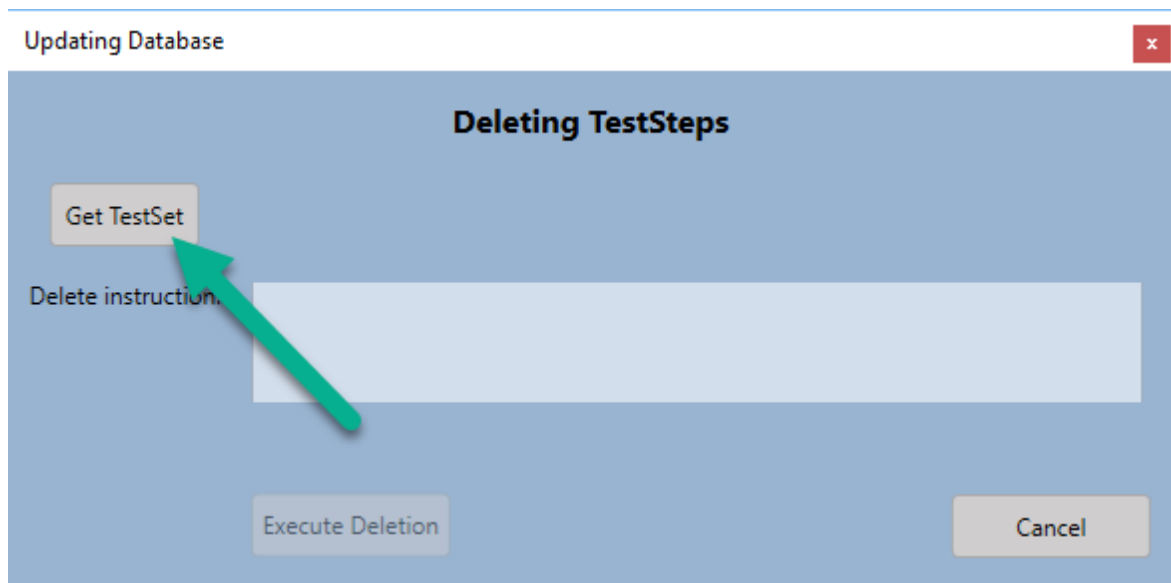

When there are too much test steps it is also possible to delete test steps with the bulk option. For doing this you can use the following option:

Steps:

- Open the Delete Elements option in the Bulk Changes Menu.

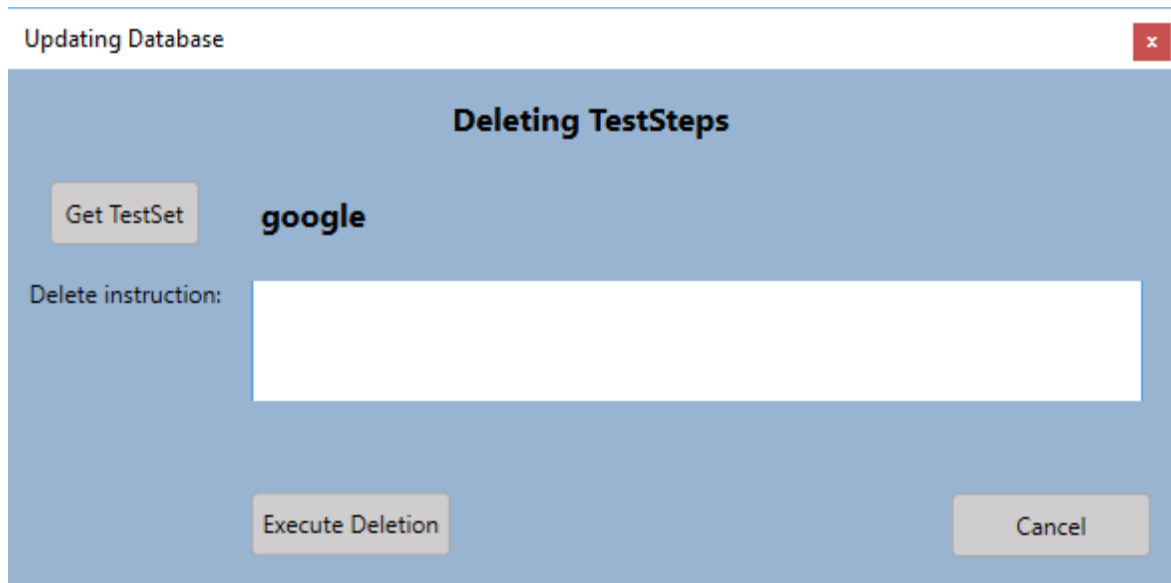

- Click the Get TestSet button to select the test scenario which elements you want to copy.

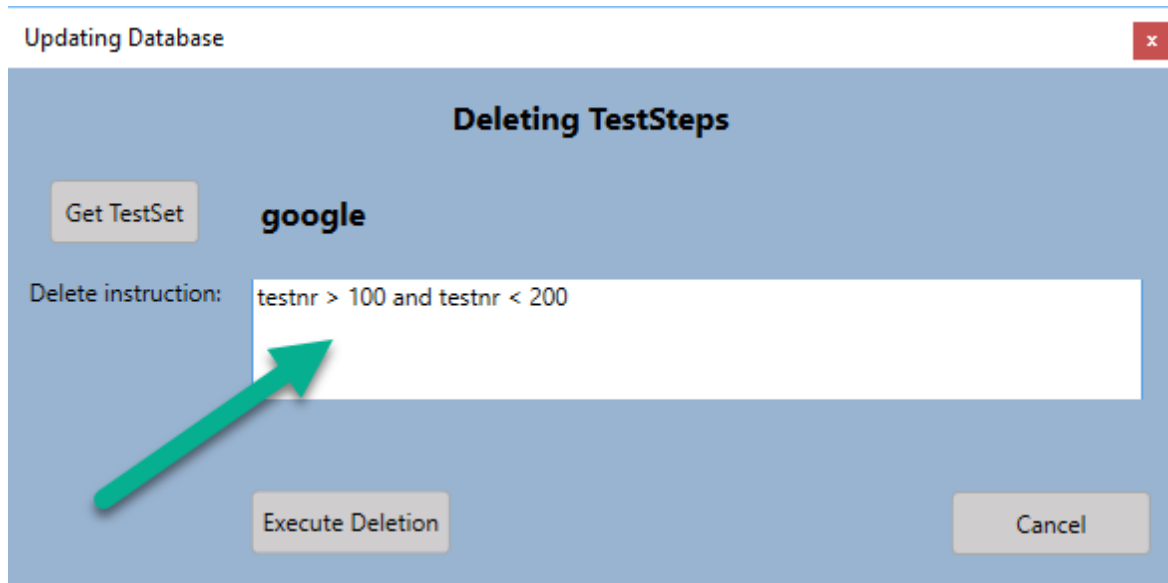

- Select an XML file with the test script you want to use and click the Open button

- The Delete instruction text box will be available and the user can fill in the delete instruction.

- For instance 'testnr > 100 and testnr < 200'

- When there is some text in the Delete instruction text box, the Execute Deletion button will be available and the user can execute the instruction. After clicking the Execute Deletion button the test steps will be deleted from the table in the database.

After that the application will show a message box.

5 Edit Test Steps

All the test steps for the selected test scenario can be edit. You can add test steps or edit or even delete test step. We will explain how you can do that.

Selenium Test Tool - Test Steps (Version: 1.5.0.0)

Show Test Cases XML File:

TestName: Attribute: Url:

TestNr: Action: Switch:

TestCase: Text: Check Text:

Element: Execute:

Nr	Testcase	Element	Attribute	Action	Text	url
----	----------	---------	-----------	--------	------	-----

Total Teststeps: 0 Close

6 Test Execution

For test execution it is needed that there is at least 1 test scenario. Otherwise the menu option for Execute Test will be disabled.

For Test Execution the user has to do the following steps:

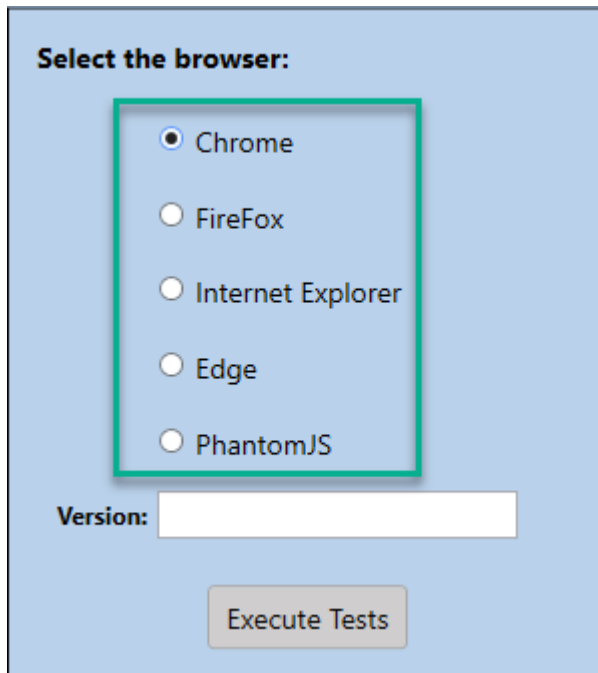

- Click on the Execution Menu

- Select the test to be execute and click the Open button

- Click on one of the five radio button for selecting a browser

Select the browser:

☒ Chrome

☐ FireFox

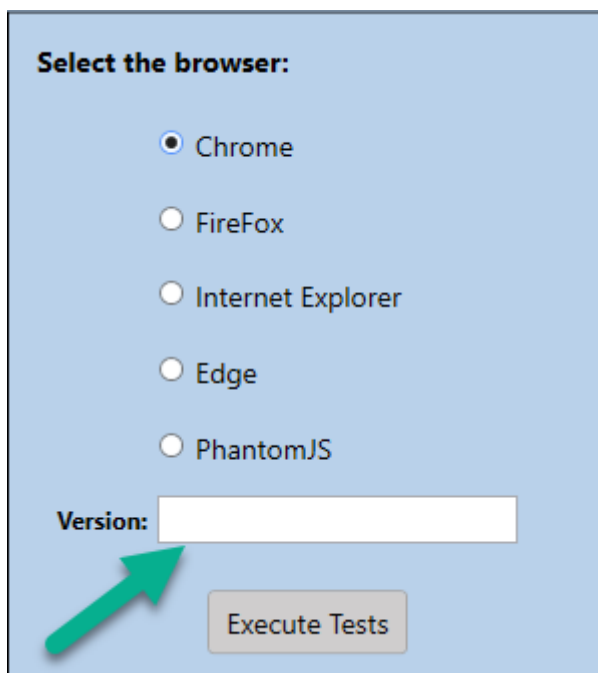

☐ Internet Explorer

☐ Edge

☐ PhantomJS

Version:

- Fill in the version of the app that will be tested. This opportunity is optional.

Select the browser:

☒ Chrome

☐ FireFox

☐ Internet Explorer

☐ Edge

☐ PhantomJS

Version:

- Click the Execute Test button

Select the browser:

☒ Chrome

☐ FireFox

☐ Internet Explorer

☐ Edge

☐ PhantomJS

Version:

After the test execution all the test results are visible in the Main Window:
